INNOVATION IN SCIENCE AND ENVIRONMENT

Developing Scientific Attitude among the children is main concern of teaching science. Science can be learnt best by doing after meticulous observation.

Aiming these things we have been organizing Science/Environmental Science Exhibition every year. Children are curious enough to explore the secrets of Nature.

Students were seen more focused on geology Volcanoes, Ocean Currents, Aviation-wireless energy, cosmic energy, Chandrayan, Aditya Mission etc., Solar System, Electric and electronic instruments like, Kalidoscope, Electroscope, Water Heater etc.

They also presented models of Ayodhya Temple, Wind Energy, Solar Energy, Water Cycle, Human Brain, Robot, and Latest Farming equipments.

A safe and healthy environment is most necessary for our survival. Fortunately we have a vast campus of more than hundred hectares and we have planted more than seventy thousand plants in the campus.

This year U.P. Deputy CM planted about 17500 plants in the campus on seven hectares of land on 22th, July 2023.
